Reasons For Allowance

The following is an examiner's statement of reasons for allowance: the prior art fails to show or suggest the use of a displaceable catch member having first and second catch elements on respective opposite sides within the environment of a surgical table transfer system of the type claimed. The closest references found in the prior art are the cited patents to Kanitzer et al (US 5,651,150) and Schweichler (US 4,277,218). These patents both show a surgical table transfer system quite similar to the one claimed, with the exception of the use of the particular catch member. In Kanitzer et al each transfer mechanism includes a body 24 (see Figures 2-4) that includes a pair of spring loaded catch members that can unitarily engage a recess 48 formed in one face of the transfer block. each catch has only one catch element on a single side, not a first and second catch element on opposing sides. Schweichler is somewhat similar, as shown in Figures 3 and 4 a pair of spring loaded catch arms are used to engage a catch plate formed as part of a first or second transfer block. Each catch member has a single catch element formed on one face. There is no suggestion in the prior art to use a single catch member with opposed catch elements formed on opposite sides of the catch member, and as such the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hannant et al (US 5,477,570), Schnelle (US 5,279,011), Schnelle et al (US

5,083,331), and Pilz (US 3,362,704) show surgical table transfer systems which are of particular interest.
